
Speaker Recognition Using Linear Prediction

speaker identification using mel frequency cepstral ... - speaker identification using mel frequency cepstral coefficients md. rashidul hasan, mustafa jamil, md. golam rabbani md. saifur rahman electrical and electronic engineering, bangladesh university ... **analysis of i-vector length normalization in speaker ...** - this non-linear transformation allows the use of probabilistic models with gaussian assumptions that yield equivalent performance to that of more complicated systems based on heavy-tailed assumptions. significant performance improvements are demonstrated on the telephone portion of nist sre 2010. index terms: speaker recognition, i-vectors, length normalization 1. introduction the recently ... **source and system features for speaker recognition using ...** - production process for the purpose of speaker recognition. the source and system components are derived using linear prediction (lp) analysis of short segments of speech. **automatic speaker recognition using neural networks** - automatic speaker recognition using neural networks submitted to dr. joydeep ghosh prepared by brian j. love jennifer vining xuening sun ee371d intro. **feature extraction using lpc-residual and mel frequency ...** - forensic speaker recognition shows very good ... forensic area. to improve, we use linear predictive coding (lpc) and its residual; it was compared with mel frequency cepstral coefficients (mfcc). the classification technique was gaussian mixture model (gmm). the collection data is in spanish language, using spontaneous speech from 37 male speaker of mexican spanish, we have three recordings ... **speaker recognition via sparse representations using ...** - text-independent speaker recognition using sparse representations. sparse representations have been used in image processing for face recognition [7], and iris recognition [8]. sparse representation of gmm-supervectors was used for speaker identification in [9] and [10]. in both these approaches, sparse representation is used for classification of gmm-super vectors. hence, these approaches ... **speaker recognition using mfcc and vector quantisation** - speaker recognition is the process of automatically recognizing who is speaking on the basis of individual information included in speech waves . speaker recognition system consists of two important phases. **a practical approach to real-time application of speaker ...** - a practical approach to real-time application of speaker recognition using wavelets and linear algebra duc son pham, michael c. orr, brian lithgow and robert mahony **speaker recognition - ccrma** - speaker recognition is the problem of identifying a speaker from a recording of their speech. it is an important topic in speech signal processing and has a variety of applications, especially in security **control system with speech recognition using mfcc and ...** - speaker recognition systems contain two main modules: speaker identification and speaker verification. with the help of mfcc we extract the information from the recognized speech signal. mfcc, the main advantage is that it uses mel frequency scaling which is very approximate to the human auditory system. we also used vqlbg algorithm (as proposed by y. linde, a. buzo & r. gray) to generate the ... **toward fail-safe speaker recognition: trial-based ...** - calibration approach transforms the system scores using a linear function trained using data selected to closely match the evaluation conditions. this selection, though, is not feasible when the evaluation conditions are unknown. in previous work, we proposed a calibration approach for this scenario called trial-based calibration (tbc). tbc trains a separate calibration model for each test ... **i-vector based speaker recognition on short utterances** - i-vector based speaker recognition on short utterances ahilan kanagasundaram, robbie vogt, david dean, sridha sridharan, michael mason speech and audio research laboratory **hmm speaker identification using linear and non-linear ...** - hmm speaker identification using linear and non-linear merging techniques unathi mahola, fulufhelo v. nelwamondo, tshilidzi marwala school of electrical and information engineering **speaker adaptation using maximum likelihood linear regression** - 2.2 speaker-dependency in speech recognition 7 in general, supervised training performs better, but there are current approaches to train speech recognizers using only little transcribed data, thus resulting in supervision-light
